1	<p>Children continue to use concrete objects and pictorial methods to support additions.</p> <p>Children use a range of methods to support their own calculations, including number squares, number lines, Numicon and ten frames.</p> <p>Bar models are used to show the combining of two parts to make a whole.</p> <p>When using objects or working on a number line, children start with the bigger number and count on.</p> <p>Children regroup to make 10 using the ten frame.</p> <p>e.g.</p>  <p>Children develop an understanding of equality.</p> <p>e.g.</p> $6 + \square = 11$ $6 + 5 = 5 + \square$ $6 + 5 = \square + 4$	<p>Children continue to use concrete objects and pictorial methods to support subtractions.</p> <p>Children use a range of methods to support their own calculations, including number squares, number lines, Numicon and ten frames.</p>  <p>Bar models are used to show the unknown number and find the difference.</p> <p>Children use number lines to count back.</p> <p>The numbered line is also used to show that $6 - 3$ means the difference between 6 and 3.</p>	<p>Children use concrete objects and pictorial methods to solve problems and recognise repeated addition.</p> <p>e.g. 3×4 $4 + 4 + 4$</p> <p>There are 3 equal groups, with 4 in each group.</p>  <p>Children are introduced to arrays as a representation, both with resources and pictorially. Arrays are used to illustrate commutativity.</p> <p>e.g. $2 \times 5 = 10$</p>  <p>Children are exposed to Bar model examples.</p> 	<p>Children use concrete objects and pictorial methods to solve problems related to division by sharing.</p> <p>e.g. $12 \div 3 = 4$</p>  <p>Children are exposed to Bar model examples.</p> 

	Addition	Subtraction	Multiplication	Division
2	<p>Children use empty number lines. They may start by adding the tens separately and then adding the ones, and then progress to adding the tens in one jump. e.g. $34 + 23 = 57$</p>  <p>Bridging through ten when necessary can help children become more efficient. e.g. $37 + 15 = 52$</p>  <p>Children will use base 10 equipment to combine the numbers and regroup to make 10 when necessary. e.g. $41 + 8$</p>  <p>Children will learn to represent base 10 using pictorial sticks and dots in a place value chart - column method.</p>  <p>Children are introduced to partitioning as a way of adding. e.g. $74 + 65 =$</p> $\begin{array}{r} 70 + 4 \\ + 60 + 5 \\ \hline 130 + 9 = 139 \end{array}$ <p>Children draw their own Bar models to represent additions.</p> 	<p>Children use empty number lines. They may start by subtracting the tens separately and then subtracting ones, and then progress to subtracting the tens in one jump. e.g. $47 - 23 = 24$</p>  <p>Bridging through ten when necessary can help children become more efficient. e.g. $42 - 25 = 17$</p>  <p>Children will use base ten equipment to subtract the numbers. e.g. $48 - 7 = 41$</p>  <p>Children will learn to represent base 10 using pictorial sticks and dots in a place value chart - column method.</p>  <p>Children will begin to learn how to regroup using base 10 equipment and through pictorial methods. e.g. $41 - 26 = 15$</p>  <p>Children draw their own Bar models to represent subtractions.</p>	<p>Children consolidate understanding of arrays from Year 1 and use these to solve problems. e.g. $3 \times 5 = 15$</p>  <p>Children understand multiplication as repeated addition. e.g. 3×5</p> $5 + 5 + 5$ <p>3 lots of 5</p> <p>This can be shown on a number line. e.g.</p>  <p>Children begin to draw their own Bar models to represent multiplications.</p> 	<p>Objects and jottings are used to support problem solving involving sharing. e.g. 12 strawberries are shared between 4 people. How many do they each get? $12 \div 4 = 3$</p>  <p>This also applies to grouping. e.g. There are 6 strawberries. If everybody gets 2 strawberries, how many people are there? $6 \div 2 = 3$</p>  <p>Arrays are also used to solve such problems. e.g. $15 \div 5 = 3$</p> $15 \div 3 = 5$  <p>Children understand division as repeated subtraction on a number line. e.g. $12 \div 3 = 4$</p>  <p>Children begin to draw their own Bar models to represent divisions.</p> 

	Addition	Subtraction	Multiplication	Division								
<p>3</p>	<p>Children can continue to use number lines and previous methods to support them.</p> <p>Children use partitioning. They will add the ones first.</p> <p>e.g. $124 + 235 =$</p> $\begin{array}{r} 100 + 20 + 4 \\ + 200 + 30 + 5 \\ \hline 300 + 50 + 9 = 359 \end{array}$ <p>The formal written method is introduced, including regrouping when necessary. This is first shown to them using place value counters and pictorial representations, before moving onto the written method.</p> <p>e.g. $243 + 368 =$</p>   $\begin{array}{r} 243 \\ + 368 \\ \hline 611 \\ 11 \end{array}$ <p>Bar models are used as another way to demonstrate the additions, and are also used to show the addition of fractions with the same denominator.</p> <p>e.g. $\frac{5}{7} + \frac{1}{7} = \frac{6}{7}$</p> 	<p>Children can continue to use number lines and previous methods to support them.</p> <p>Children build on techniques used in Year 2, using place value counters (in place of base ten) and pictorial methods to show subtractions.</p>   <p>Formal written methods are introduced, including regrouping when necessary.</p> <p>e.g. $234 - 88 =$</p> $\begin{array}{r} 1\ 2\ 1 \\ 2\ 3\ 4 \\ - 8\ 8 \\ \hline 1\ 4\ 6 \end{array}$ <p>Bar models are used to represent these subtractions.</p> 	<p>Children can continue to use previous methods to support them.</p> <p>Children are able to model a multiplication calculation using an array.</p> <p>This understanding will lead the children to an introduction of the grid method.</p> <p>e.g. $6 \times 14 =$</p>  <p>This can also be represented as:</p> <table border="1" data-bbox="1167 691 1469 754"> <tr> <td>x</td> <td>10</td> <td>4</td> <td></td> </tr> <tr> <td>6</td> <td>60</td> <td>24</td> <td>= 84</td> </tr> </table> <p>Bar models are drawn to represent their calculations.</p> 	x	10	4		6	60	24	= 84	<p>Children build on techniques from Year 2.</p> <p>Concrete representations will be used to show divisions with remainders.</p> <p>e.g. $13 \div 4 = 3 \text{ r}1$</p>  <p>Lollipop sticks can be used to form whole squares as we are dividing by 4.</p> <p>Children can represent this pictorially through drawing arrays and number lines.</p> <p>e.g. $13 \div 4 = 3 \text{ r}1$</p>   <p>Children begin to use the short division technique known as the 'Bus Stop' method (for dividing two-digit numbers by a one-digit number) using concrete and pictorial methods to support them.</p> <p>e.g. $84 \div 4 =$</p> $\begin{array}{r} 21 \\ 4 \overline{) 84} \\ \underline{8} \\ 0 \\ \underline{0} \\ 0 \end{array}$  <p>Bar models are used to represent their calculations, as well as finding fractions of a number.</p> <p>e.g. $\frac{1}{3}$ of 18</p> 
x	10	4										
6	60	24	= 84									

	Addition	Subtraction	Multiplication	Division																														
4	<p>Children consolidate formal written method, including regrouping when necessary.</p> <p>They will draw on all methods previously learnt, including using resources and pictorial methods, to support their learning.</p> <p>e.g. $3587 + 675 = 4262$</p> $\begin{array}{r} 3587 \\ + 675 \\ \hline 4262 \\ \small{111} \end{array}$ <table border="1" data-bbox="224 598 604 670"> <tr><td colspan="2">4262</td></tr> <tr><td>3587</td><td>675</td></tr> </table>	4262		3587	675	<p>Children consolidate formal written method, with numbers up to four digits, including regrouping when necessary.</p> <p>They will draw on all methods previously learnt, including using resources and pictorial methods, to support their learning.</p> <p>e.g. $6467 - 2684 = 3783$</p> $\begin{array}{r} 5131 \\ 6467 \\ - 2684 \\ \hline 3783 \end{array}$ <table border="1" data-bbox="705 686 1108 758"> <tr><td colspan="2">6467</td></tr> <tr><td>3783</td><td>2684</td></tr> </table>	6467		3783	2684	<p>Children continue to use the grid method where they feel confident doing so.</p> <p>Children are introduced to the formal written method, including carrying when necessary. Multiplications are based on two and three-digit numbers by a one-digit number.</p> <p>e.g. $24 \times 8 =$</p> $\begin{array}{r} 24 \\ \times 8 \\ \hline 32 \quad (8 \times 4) \\ + 160 \quad (8 \times 20) \\ \hline 192 \end{array}$ <p>We do this by starting with the expanded method so children can see the link from the grid method.</p> $\begin{array}{r} 24 \\ \times 8 \\ \hline 192 \end{array}$ <p>Then move to formal method.</p> $\begin{array}{r} 24 \\ \times 8 \\ \hline 192 \end{array}$ <table border="1" data-bbox="1198 901 1590 981"> <tr><td colspan="8">192</td></tr> <tr><td>24</td><td>24</td><td>24</td><td>24</td><td>24</td><td>24</td><td>24</td><td>24</td></tr> </table>	192								24	24	24	24	24	24	24	24	<p>Children continue to use short division (Bus Stop method) to divide three-digit numbers by a one-digit number, using resources and pictorial methods when needed.</p> <p>e.g. $615 \div 5 =$</p>   $\begin{array}{r} 123 \\ 5 \overline{) 615} \\ \underline{6} \\ 1 \\ \underline{ 1} \\ 5 \\ \underline{ 5} \\ 0 \end{array}$ <p>When necessary, children should be able to identify and interpret remainders within a context.</p> <p>Children will continue to use the bar model to support divisions and fractions.</p> <p>e.g. $\frac{2}{3}$ of 24</p> <table border="1" data-bbox="1691 1045 2083 1125"> <tr><td colspan="3">24</td></tr> <tr><td>8</td><td>8</td><td>8</td></tr> </table>	24			8	8	8
